Cheboygan, Michigan | 111-111-1111 | example@gmail.com | [Portfolio URL] | [GitHub URL] | [LinkedIn URL]

SUMMARY

Software developer with six years of C# and Unity experience specializing in object-oriented architecture, editor tooling, workflow automation, and data-driven systems. Builds maintainable frameworks and graphical development tools for long-term projects. Ready to apply these skills while learning Configura Magic and the CET development environment.

SELECTED PROJECTS

Systems-Driven Simulation Framework

C# | Unity | JSON | Git | Ongoing

- Design and continue developing the technical foundation for a systems-driven simulation game, emphasizing reusable architecture and developer tooling.
- Built modular inventory, dialogue, world-generation, navigation, and gameplay systems.
- Developed editor tools for spline-based roads and tilemap workflows; architected loosely coupled systems for scalability and long-term maintenance.

Unity Asset Pipeline Automation

C# | Unity Editor

- Created custom editor tools for bulk asset import, configuration, and project setup.
- Standardized imported assets to reduce manual corrections and improve consistency.
- Designed reusable tooling around repeatable workflows rather than one-off scripts.

Blender Production Toolkit

Python | Blender API | Unity

- Developed Blender extensions that automate conversion of pixel-art assets into standardized 3D models.
- Built tools for model folding and configurable Unity export, including merging, modifiers, baking, and asset preparation.
- Reduced repetitive artist work through reusable production controls.

Aseprite Workflow Extensions

Lua | Aseprite API

- Built Lua extensions for light-map generation and recurring pixel-art image-processing tasks.
- Integrated the tools into a broader Blender and Unity production pipeline to improve consistency and reduce manual editing.

EXPERIENCE

Apprentice Carpenter

2024-Present

CJ Fisk Construction

Gaylord, Michigan

- Worked on residential additions, remodels, decks, finish carpentry, and other custom construction projects.
- Completed portions of projects independently while maintaining quality and schedule.
- Communicated directly with homeowners about project progress and site conditions.
- Interpreted plans, measurements, and existing conditions to resolve construction challenges.

EDUCATION

Associate in Computer Information Systems - Software Development

2024

Mid Michigan College

Additional university coursework at the University of Michigan and Central Michigan University.

TECHNICAL SKILLS

Languages: C#, Python, C, JavaScript, SQL, Lua, HTML/CSS

Development: Object-Oriented Design, Application Architecture, Workflow Automation, Editor Tool Development, Debugging, Git, JSON

Tools: Unity, Blender, Aseprite, Linux, Bootstrap
